

Used Parts for Forklifts

Used Forklift Parts - Inevitably, forklift parts would eventually wear out and require replacing. The alternative of obtaining brand new parts can become pricey so another idea is to purchase used components. This can save a lot of money eventually. It is a good idea to buy used forklift parts that have been remanufactured. These components would ensure that you are getting parts which would work for a long time and be productive.

Broken or worn parts which are remanufactured are a very cost effective solution as opposed to rebuilding. With rebuilding components, only the parts that are worn out or broken get replaced, which means that other wearable parts could break down soon after acquisition.

Remanufacturing on the other hand offers the best assurance for second-hand components. Reproduced components are taken apart and cleaned and then all wearable pieces are replaced. All wearable parts are replaced regardless of age or wear which is one more rationale why reproduced components on the whole operate so much better. Any component within the part is new and this offers much longer life to the second-hand part. Based on the lift truck parts that are being redone, the cleaning process and the whole remanufacturing process would vary.

The engines are cleaned after a complete disassembly. Various engine parts such as spark plugs, pistons, rings, filters, valves, and valve springs can be replaced during the process of remanufacturing. The engines are hot tested after reassembly to ensure that there are no noise, no oil pressure problems, no leaks or any vacuum.

Transmissions are oven cleaned, pressure washed, and disassembled. A thorough inspection is done to be able to check for any cracks. Bushings, seals and bearings are all replaced. Normally, the replacement parts utilized on transmission components meet OEM specifications.

A few forklift parts like torque converters, the alternator, the water pump, the starter and steer axles can be quite serviceable after worn components are replaced. The electronic control in the electric lift truck is maintained by the control card. This particular card could also be remanufactured with replacing all aged and worn out parts. Not like various lift truck components the control card could only have the worn and aged parts replaced.

Components that are remanufactured have to be comprehensively examined upon reassembly to guarantee they are in good condition previous to being sold. When acquiring these parts, it is a good idea to make sure that they have undergone all of the proper testing and inspections. On certain bigger parts like for instance engines, transmissions and steer axles, OEM specification replacement parts should be used.

The lift truck dealer can ensure that the components they have remanufactured meet the OEM specifications. This will likewise ensure the components meet industry standards. Lots of details go into remanufacturing used parts. This attention to detail offers more serviceability out of remanufactured components than the parts that were simply rebuilt.
